An individual user licenses AutoCAD for a fee that varies according to the number of people who share the license. If an entire company licenses the software for one individual user, it is called a site license. If an entire company licenses the software for 20 or more users, it is called a corporate license. If a company wants to use an unlimited number of copies, it can license the software from a reseller, who in turn can contract the license from the software's original publisher, Autodesk. AutoCAD offers many features to help users develop and manage 3D computer models. From a simple point-and-click method to use the software's "sculpting" tools to a fully interactive, "software-controlled" method to complete a task, AutoCAD helps users turn their 2D and 3D ideas into tangible products in a single click. The software has received a total of 3 awards from the Royal Institute of Technology in Stockholm, Sweden. AutoCAD features include: Scaling Viewing Matching Dimensions Features Sculpting 3D Modeling Exports Nested dimensions The Line Modeling tools are used to draw 2D and 3D geometric shapes (such as circles, squares, rectangles, and triangles). The Line Modeling tools in AutoCAD consist of five commands: Line Polyline Circle Rectangle Triangle These tools are used to draw straight or curved lines that can be combined to form 2D shapes, such as squares, circles, rectangles, and triangles. The Line Modeling tools have the ability to create surfaces, by using either the polyline or circle tools to create multiple points along the curve. To draw a circle with a centered, 2-D square, the following steps can be used: 1. Click the Polyline tool on the left side of the command bar. 2.
