
Avfdoubleshockcontrollerdriver ((NEW))

avfdoubleshockcontrollerdriver How to create a virtual machine driver using avfdoubleshock in Ubuntu? I'm developing a project with the avfdoubleshock command line tool and now I need to create a virtual device driver using this tool. I tried to create a driver using this command: avfdoubleshock -s -j -t VM_USB_DRIVER_INSTALLED_PATH=/root/mnt/dev/usb/m1 -i /dev/m2 -m -n but nothing happens even if i gave the path to the device i want How can I do this?
