\* \*\*Photoshop Elements:\*\* This is a free program that serves as a web-based subscription service and a free trial download. It has many photo-editing tools, but it's designed for nonprofessionals. If you're interested in using it, you have to go to the website and click the button to register. I generally give people the option to make an initial investment in Photoshop and then return to it when they need to edit a picture, but when people use Photoshop Elements, I encourage them to dive in right away. To the right is a graphic of Photoshop Elements with a small circle underneath that says "Photoshop for free." The free version doesn't come with layers and many of its tools, so you're limited in what you can do. \* \*\*Illustrator:\*\* If you want to draw, then Illustrator is for you. It's a vector graphics program that enables you to create art from scratch, edit, and manipulate vector images. If you want to take your drawing skills to the next level, you can use Illustrator's spline, bezier, and other drawing tools to create clean, smooth curves. The "Draw" tools can be found in the Window menu. The "Draw" tools, which are explained in Chapter 10, enable you to modify shapes, curves, and lines. You can open, modify, and print your files in either Photoshop or Illustrator. \* \*\*Fireworks:\*\* This is a vector graphics program similar to Illustrator. It also enables you to work with images. Fireworks users can create and work with vector images — graphics that scale in

size with the view, such as a web banner or flyer — with ease. It's a good all-purpose drawing and editing program, although it's not as flexible as Illustrator. Fireworks is used to create web graphics and the graphics for banners, videos, e-mail, and other digital projects. \* \*\*Adobe Flash Builder:\*\* I know, I know. You can make games in Photoshop, but why would you do that? Why would anyone use Flash Builder? My answer is, if you know JavaScript, then you should have no problem with Flash Builder.

As you may have guessed, Flash Builder is the program that Adobe uses to make applications (such as games and web sites) with Flash technology. Flash Builder enables you to make a website in HTML5, CSS, and JavaScript, and to make a

Q: How to add a Specific Quantize for a Numpy array? I try to add a specific quantize for my array. I try to measure a table which results to 1.00 which is actually 0.55 (Then I multiply the inputs with this value and add 0.55 to the result). This is the code I use for this purpose: `import numpy as np quant = np.percentile(res / 0.55, 0.5) res = quant * res + 0.55` The problem is, that I get values like: `print(res) 0.6426572` But it should be 0.6333333. Is there a proper way to add quantize to a numpy array? A: The next code is simpler and it is math basis, `import numpy as np # your initial values res = np.random.uniform(0, 100, size = (10, 10)) # calculating quantize quant = np.percentile(res / 0.55, 0.5) res = quant * res + 0.55 print(res)` But I would advice against using percentiles for quantization. The quantize value may be over/under-estimated if the input size or data distribution is not homogeneous. If you want exact same values, you should use simple round up/down quantization: `res = np.round(res * 1.5).round(decimals = 3)` as a side note, you should understand what are basic statistical concepts. Percentile is a value that is chosen for a measure of centrality of a distribution, so it doesn't make much sense. All of these “smoking gun” email chains show that Hillary Clinton lied during her testimony under oath about the mislabeling of her emails, which showed she used her server to trade off information for favors. Of course, Clinton’s Deputy Chief of Staff, Huma Abedin, is also accused of sending classified emails on the private server. Yet another email reveals that Cheryl Mills sent classified material to Clinton’s deputy chief of staff Huma Abedin via her work computer. Also, she sent personal emails to Abedin from Clinton’s unsecured email servers. And a State Dept. senior staffer, Jake Sullivan,

who at the time was working on Clinton's 2009 Senate bid sent classified info to her aide. Public records show that on the day of the 2016 Democratic National Convention, Clinton registered for a total of 3 or more separate trips to her home on the Chappaqua/Westchester County line – at a combined total cost of \$6,000. Most of those trips included many photos. In this election cycle, according to the Federal Election Commission (FEC), Trump spent a paltry \$5.3 million out of \$63 million spent while Hillary spent \$60.4 million. Clearing of the anthracite ducts and the throat of a 0.8 meter tall man. A tracheostomy performed for life-threatening obstruction can be used to promote airway clearance. During this procedure, the patient is supported in a prone position with the arms flexed to achieve a "V"-like configuration of the trunk. However, this position can be difficult to maintain for extended periods of time. Moreover, anatomical features, such as the presence of obesity, a short neck and a tight fist are challenging to the anesthesia provider. This case report describes two techniques used to reduce the risk of these challenges, namely, the application of traction to the head and neck prior to the procedure and maintaining a slight hyperextension of the neck during the procedure. The technique was performed for a 0.8-metre tall man. The first case shows the risks related to traction application to the head and neck and the second case reports the history of a patient who had a tight fist in which the application of traction to the head and neck was performed successfully. In both cases, the procedure was successfully performed.
