The plugin has built-in layers, compression, and every other feature that will get you up and running fast. It's more than just a tool to add layers to your Photoshop file though. In addition to the standard drag-and-drop methods, Layer Assist offers better navigation, an integrated progress bar, undo/redo support, and add-on functionality like preset naming and export. For real-time layer editing, layer merge, performance improvements, and more, Layer Assist is your new best friend. It's at the top of our list of the best Photoshop plugins.

Astrophytum Astrophytum is a genus of flowering plants in the family Zygophyllaceae, the paraphyletic "tribe" Commelinaceae. Astrophytums are mostly tropical or subtropical; some are found in the southeastern United States. Astrophytums have glossy, rounded leaves with 10-40 leaflets, usually with three leaflets; in some species, like *A. densiflorum*, the leaves are evergreen, and the flowers are all perfect. The genus is named after Astrophytum, one of the highest mountain peaks in Greece. Tribes in the genus Astrophytum s.l. [3-week treatment of adult acute lymphoblastic leukaemia--phase II study with alternating regimens using prednisone and vincristine]. The prognosis of adult acute lymphoblastic leukaemia (ALL) without Down-Syndrome, is still poor. Treatment with cytostatic drugs is potentially very myelosuppressive. It was therefore decided to attempt a treatment using alternating cytostatic drugs. Therefore, we performed a phase II study in four adults ALL-patients. A treatment of 21 days alternating monotherapy with prednisone and vincristine has been used. All patients showed a transient increase in the number of circulating leukocytes (on Day 7 after start of therapy). Two patients died because of toxicity (one during the first treatment cycle and one second treatment cycle). All four patients are in complete remission after a follow-up of more than half a year. In conclusion, the therapeutic effect obtained with

these alternating regimens is not satisfactory. The toxicity is too high and there may be synergistic interactions between the vincristine and prednisone.

Q: How to use environment variables in Azure App Service's Logs command? I am trying to create a log file on my Azure App Service instance that contains the contents of my IIS logs. I can successfully do that with a simple Azure CLI command: `az webapp logs tail --resource-group my-resource-group --name my-app --start-time now+1hour --output-path logs.log` But I'd like to be able to customize the file name (which would really be an easy task), by using environment variables from the Azure Portal. I haven't been able to figure it
