What's New In Bill Dashboard For Windows 10 8.1?

Bill Dashboard is a robust and comprehensive application that comes bundled with all the necessary components to provide a complete and simple way to add and keep track of ongoing and finished transactions and bills. Description: Simplify your everyday life with the simple tools at your disposal. This interesting and potentially useful application allows you to record all the pending transactions and bills to the app and check the status of all the ones that are already paid. The tool is available for

Windows and comes bundled with a free trial version. The tool is installed through Windows Store and the setup is swift and doesn't require any additional steps. The interface is accessible yet cluttered. For those who are using the app for the first time might take some time to get familiarized with all its functions. There are two categories, bills and payments. The first one offers an overview of all the upcoming bills and can be sorted by due date, category, or already paid. The latter offers the possibility to add new records, change the default transaction, and edit the status of a bill. The app doesn't feature a database, as it's built with a flat and tree structure. Bill Dashboard offers a

summary of the upcoming bills, so you won't have any further difficulties in managing your ongoing transactions. The app is compatible with Windows 10, 8, 8.1, and offers you the option to create your own database or import the pre-made ones. Enter your monthly bills into this handy app, and view your overview in no time at all. Take your time to learn what each element does The layout is divided into two main categories, bills and payments. Unfortunately, you can't create your own database nor delete the pre-made records, as they influence the total amount of money. Each category is represented by a distinct color to easily view the upcoming bills and the paid ones.

Unfortunately, you can't choose the tone by yourself, as they are randomly attributed. Add and manage multiple entries, and study the reports A nice feature is the ability to add irregular payments, such as dining, groceries and various personal products that are bought when you need them. Having the option to edit existing items, you can easily change the default ones with your own. What's more, you can backup and restore the database in case you have issues with your computer. The summary displays four different lists, namely, all the payments, this year, 1-3 months. Unfortunately, you can't export the index to a document to further plan your budget, nor pick the

proper currency. On an ending note The bottom line is that Bill Dashboard is a useful and approachable application created to provide a simple yet efficient method to enter and keep track of all your ongoing and finished transactions and bills and view
